**Guarding the Frontier** Mark L. Stein,2007-01-26 The seventeenth-century Ottoman-Habsburg frontier was the scene of chronic conflict. The defences of both empires were based on a line of fortresses, spanning the border. Mark Stein gives us a fascinating insight into everyday life on the frontier in this turbulent time in Ottoman history, by investigating the social, economic, and military aspects of Ottoman forts and garrisons in a new comparative approach. Drawing on a wide range of Ottoman and Western archival and narrative sources, *Guarding the Frontier* assesses the state of early-modern Ottoman military architecture and siegecraft; and, carefully dissects the Ottomans' ability to besiege, defend, build, and repair fortifications in the seventeenth century, as well as the relationship between the central and provisional administrations. This thorough overview includes an assessment of the empire's ability to marshal the manpower and supply requirements for lengthy sieges; a survey of Ottoman artillery; and the procedures involved in building and maintaining frontier forts. Studying an extensive database compiled from seventeenth-century garrison payroll records, Stein paints a fascinating description of the various types of troops who served on the Ottoman-Habsburg frontier: slave and levied soldiers, cavalry and infantry, Muslims and Christians, charged with defending the Ottoman Empire at this fascinating point in History.

Tables of Spectral Lines of Neutral and Ionized Atoms A. R. Striganov,N. S. Sventitskii,2013-11-21 Tables of Spectral Lines of Neutral and Ionized Atoms was first published in Moscow in 1966. All misprints and errors that have come to our attention have been corrected, and additions based on journal articles have been made for the Plenum Press edition. In particular, additions have been made in the tables for Li (4), C I [1], N I (1), N IV [12], and N V [14]. Such highly important spectra as those of N IV, NV, O IV, O V, and O VI in the visible and partially in the ultraviolet regions have, until recently, received almost no attention in the laboratory. The tables of these spectra include astrophysical data from B. Edlen (*Z. Astrophys.* , 7:378, 1933) and C. E. Moore (*A Multiplet Table of Astrophysical Interest, Part I, N. B. S.* , 1945) with rather rough estimates of the wavelengths of the spectral lines. But as the spectra of highly ionized atoms have been studied in the laboratory, these values have been determined more precisely, and we have striven to incorporate them in the American edition of the book. For the spectra of N IV and NV, we have employed the recent, comprehensive papers of R. Hallin (*Arkiv for Fysik*, 32:201, 1966; 31:511, 1966), in which the system of energy levels was refined and expanded, and many classified lines in the visible, ordinary ultra violet, and vacuum ultraviolet regions are cited.
