*Recent Advances in Nanofabrication Techniques and Applications* Bo Cui,2011-12-02 Nanotechnology has experienced a rapid growth in the past decade, largely owing to the rapid advances in nanofabrication techniques employed to fabricate nano-devices. Nanofabrication can be divided into two categories: bottom up approach using chemical synthesis or self assembly, and top down approach using nanolithography, thin film deposition and etching techniques. Both topics are covered, though with a focus on the second category. This book contains twenty nine chapters and aims to provide the fundamentals and recent advances of nanofabrication techniques, as well as its device applications. Most chapters focus on in-depth studies of a particular research field, and are thus targeted for researchers, though some chapters focus on the basics of lithographic techniques accessible for upper year undergraduate students. Divided into five parts, this book covers electron beam, focused ion beam, nanoimprint, deep and extreme UV, X-ray, scanning probe, interference, two-photon, and nanosphere lithography.

**Children of Immigrants** National Research Council,Division of Behavioral and Social Sciences and Education,Commission on Behavioral and Social Sciences and Education,Committee on the Health and Adjustment of Immigrant Children and Families,1999-11-12 Immigrant children and youth are the fastest-growing segment of the U.S. population, and so their prospects bear heavily on the well-being of the country. *Children of Immigrants* represents some of the very best and most extensive research efforts to date on the circumstances, health, and development of children in immigrant families and the delivery of health and social services to these children and their families. This book presents new, detailed analyses of more than a dozen existing datasets that constitute a large share of the national system for monitoring the health and well-being of the U.S. population. Prior to these new analyses, few of these datasets had been used to assess the circumstances of children in immigrant families. The analyses enormously expand the available knowledge about the physical and mental health status and risk behaviors, educational experiences and outcomes, and socioeconomic and demographic circumstances of first- and second-generation immigrant children, compared with children with U.S.-born parents.
