The Orion Prophecy Patrick Geryl,Gino Ratinckx,2001 In the year 2012 the Earth awaits a super catastrophe: its magnetic field will turn over in one go. Phenomenal earthquakes and tidal waves will completely destroy our civilisation. Europe and North America will shift thousands of kilometres northwards into polar climate. Nearly the whole earth's population will perish in the apocalyptic happenings. These dire predictions stem from Mayans and Egyptians -- descendants of the legendary Atlantis. The Atlanteans had highly evolved astronomical knowledge and were able to exactly calculate the previous world-wide flood in 9792 BC. They built tens of thousands of mandjits and escaped to South America and Egypt. In the year 2012 Venus, Orion and several other stars will take the same 'code positions' as in 9792 BC, the year of the previous cataclysm! For thousands of years historical sources have told of a forgotten time capsule of ancient wisdom located in a mythical labyrinth of secret chambers filled with artefacts and documents from the previous flood -- this book gives one possible location.

Data Warehouse Designs Fon Silvers,2011-12-14 Market Basket Analysis (MBA) provides the ability to continually monitor the affinities of a business and can help an organization achieve a key competitive advantage. Time Variant data enables data warehouses to directly associate events in the past with the participants in each individual event. In the past however, the use of these powerful tools in tandem led to performance degradation and resulted in unactionable and even damaging information. Data Warehouse Designs: Achieving ROI with Market Basket Analysis and Time Variance presents an innovative, soup-to-nuts approach that successfully combines what was previously incompatible, without degradation, and uses the relational architecture already in place. Built around two main chapters, Market Basket Solution Definition and Time Variant Solution Definition, it provides a tangible how-to design that can be used to facilitate MBA within the context of a data warehouse. Presents a solution for creating home-grown MBA data marts Includes database design solutions in the context of Oracle, DB2, SQL Server, and Teradata relational database management systems (RDBMS) Explains how to extract, transform, and load data used in MBA and Time Variant solutions The book uses standard RDBMS platforms, proven

database structures, standard SQL and hardware, and software and practices already accepted and used in the data warehousing community to fill the gaps left by most conceptual discussions of MBA. It employs a form and language intended for a data warehousing audience to explain the practicality of how data is delivered, stored, and viewed. Offering a comprehensive explanation of the applications that provide, store, and use MBA data, Data Warehouse Designs provides you with the language and concepts needed to require and receive information that is relevant and actionable.
