United States Code United States, 2013 The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012

edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.

Evaluation of Bonds for Financing State Highway Expenditures in Texas William F. McFarland,Jeffery Lynn Memmott,Alberto Castano-Pardo,1995 This report presents some findings on the evaluation of bond financing for use in highway finance in Texas. It provides information that can be used by the Texas Department of Transportation (TxDOT) and others in deciding whether or not to include the issuance of bonds in the mix of funding that is available for highway investment. Use of bond financing is not, ultimately, a way of financing expenditures. It is merely a way of changing the timing of expenditures or reallocating the use of revenues over time. Eventually, the bonds plus interest and other charges associated with the bond issue must be repaid with revenues from either existing taxes or, possibly, new revenue sources. Because bond financing is an expenditure strategy as opposed to being a basic revenue source, the criteria for evaluating bonds are somewhat different from those typically used for evaluating alternative revenue sources. This report presents two main findings on the use of bonds. First, new analyses of the impact of bonds on the highway system and motorists are made using the Highway Performance Monitoring System investment analysis. These findings indicate that use of bonds will lead to deterioration of the highway system over time if available revenues remain at current levels, in real dollars. The negative impact is forecasted to increase dramatically at higher levels of bond use. Second, a public opinion survey of Texas residents was conducted to determine public attitudes toward bond financing and other means of highway finance. This survey indicates that the public supports the use of bonds by the State to finance highways in Texas. There is some indication that they are less favorably inclined toward bonds when they realize that use of bonds reduces future funding by about twice the level of the bond issue because of interest and other bond costs. There also is some indication that the public may support bonds more for specific facilities, as opposed to facilities in general. Research findings suggest that the Texas Department of Transportation should be very cautious in using bonds to finance transportation, unless new basic revenue sources are available to pay for the bonds.

Daylighting and electric lighting retrofit solutions Aktuna, Berat, Bueno, Bruno, Darula, Stanislav, Deneyer, Arnaud, Diakite, Aicha, Fuhrmann, Peter, Geisler-Moroder, David, Hubschneider, Carolin, Johnsen, Kjeld, Kostro, Andre, Malikova, Marta, Matusiak, Barbara, Prella, Patrick, Pohl, Wilfried, Tao, Luo, Tetri, Eino, 2016-11-03 Energy efficient lighting is said to be one of the most cost-effective approaches to save energy and reduce CO2 emissions. In order to stimulate the application of lighting retrofits of good quality, IEA Task 50, Subtask B "Daylighting and Electric Lighting solutions" has looked into the assessment of existing and new technical retrofit solutions in the field of façade and daylighting technology, electric lighting and lighting controls. The document provides information for those involved in the development of retrofit products or involved in the decision making process of a retrofit project, such as buildings owners, authorities, designers and consultants, as well as the lighting and façade industry. This source book addresses both electric lighting solutions and daylighting solutions, and offers a method to compare these retrofit solutions on a common basis, including a wide range of quality criteria of cost-related and lighting quality aspects. Simple retrofits, such as replacing a lamp or adding interior blinds, are widely accepted, often applied because of their low initial costs or short payback periods. The work presented in this report aims at promoting state-of-the-art and new lighting retrofit approaches that might cost more but offer a further reduction of energy consumption while improving lighting quality to a greater extent. Energieeffiziente Beleuchtung ist eine der effektivsten Möglichkeiten, Energie zu sparen und damit die Emission von CO2 zu vermindern. Im Rahmen des IEA Task 50, Subtask B "Daylighting and Electric Lighting solutions" wurden daher neue und vorhandene technische Sanierungslösungen für Gebäude in den Bereichen Fassade, Tageslichttechnik, künstliche Beleuchtung sowie Lichtsteuerung bewertet, um die Anwendung hochwertiger Lösungen voranzutreiben. Die Informationen sind dabei für alle in den Sanierungsprozess einbezogenen Personen von großem Interesse, wie z. B. Gebäudeeigentümer, Behörden, Planer und Berater aber auch für Hersteller und Entwickler von Beleuchtungs- und Fassadenlösungen. Betrachtet werden sowohl künstliche als auch Beleuchtungslösungen mit Tageslicht, wobei eine Methode entwickelt wurde, die Sanierungslösungen grundlegend miteinander zu vergleichen. Hierbei werden zahlreiche Kriterien berücksichtigt, die energetische, lichttechnische, thermische und kostenbezogene Aspekte beinhalten. Einfache Sanierungsmaßnahmen wie der Austausch von Lampen oder die Montage innenliegender Jalousien werden weitgehend akzeptiert und oft verwendet, da sie kostengünstig sind und sich schnell amortisieren. Die vorliegende Arbeit hat es sich zum Ziel gesetzt, die Anwendung neuer und dem Stand der Technik entsprechender Beleuchtungslösungen für die Sanierung zu fördern. Diese verursachen zwar eventuell höhere Kosten, ermöglichen jedoch eine weitere Energieeinsparung bei gleichzeitiger Verbesserung der

Beleuchtungsqualität.
