Physics and Global Dynamics José Tiberius,2017-11-01 Relationship between mass and its movement or velocity, and its variation or acceleration in Global Dynamics. Laws of Newton. Concept of force, motion, energy and mass as properties of reticular matter. Types of movement. Dynamics of light and free fall bodies. Actually, Newton's Physics provided the causes for being at rest more than those for motion. I don't know if Newton liked to ski and eliminate friction much, but what he needed were forces that counteract the omnipresent force of gravity in order to explain why an object remained at rest. Wikipedia points out that while, according to the ancient Physics of the Greeks, the natural state of bodies was to be at rest, for Modern Physics, it is conserving the state of movement that they are in if the causes for being at rest, such as friction, are eliminated. If Newton's Laws developed the dynamics of being at rest, the Theory of Relativity and Quantum Mechanics, both of which were around the beginning of the last century, have developed the kinematics of movement. That is, they are scientific theories that describe movement but not the causes for it, just its mathematical representation. Einstein's General Relativity tries to add some causes, such as the geometric effect of the space-time continuum, but it is still a mathematical explanation, always biased and with many odd singularities.

Global Mechanics José Tiberius,2018-09-01 Structure, states and properties of matter. Concept of gravitation, energy and mass within a theory of unification of matter, gravity, energy and mass. Elementary particle Physics, atomic model and bonds of atoms and molecules. Despite it is specific nature, the Global Mechanics has to be understood as immersed in the Theory of Global Equivalence. This book about the theory of everything studies the physics principles regarding the equivalence between gravity and mass within a perspective of its material support, physical constitution or physical reality and energy as a property of the various states of matter in general. If the Global Dynamics deals with space and time regarding gravity physics, the Global Mechanics is more concerned with subjects closer to Quantum Mechanics or Quantum Physics. Two

aspects deserve special attention; mass and normal matter exist as physics entities regardless of the observer. The second point is that in the new theory of everything virtual mathematical forces of the gravity field are no longer necessary. Among the aspects of the theory of everything in the Global Mechanics that stand out the most, we can cite the following: -A new definition of the structure of matter in wide sense, addressing gravity (globine), energy and mass. -Unification of gravitational and electromagnetic fields. -Unification of gravity force with weak and strong nuclear forces and new model of the atom.

Video Conferencing over IP: Configure, Secure, and Troubleshoot Michael Gough, 2006-06-07 This book demystifies the technology behind video conferencing and provides single users and small enterprises with the information they need to deploy video conferencing efficiently and cost effectively. For many years, the promise of high quality, low cost video conferencing has been an attractive solution for businesses interested in cutting travel costs while maintaining the benefits of face-to-face contact. Unfortunately, most solutions never lived up to the promise, due primarily to lack of internet bandwidth and poorly developed protocols. That's no all changed. The capacity has been created, the hardware works, and businesses are more eager than ever to cut down on travel costs. * Budget conscious methods for deploying Video over IP in small to medium enterprises * Coverage of Cisco, Microsoft, Skype, AOL, Google, VidiTel and many other products * How to identify and resolve nagging quality of service issues such as transmission delays and out of synch video-to-voice feeds

Global Astrophysics and Cosmology José Tiberius, 2019-03-01 Global Astrophysics and Cosmology is Volume II of Global Physics, an intuitive interpretation of Quantum Mechanics and General Relativity. The book proposes some thoughtful ideas on present-day enigmas of Astrophysics: • The stars' nuclear fusion provokes an expansion of the universe -Global Aether, String, gravitons, o space-time if you prefer. Therefore, dark energy is not necessary anymore. • The expansion pushes the stars to larger orbits, which elucidates their higher speed than a Newtonian orbit and the typical spiral arms of galaxies, making unnecessary dark matter. • It seems that most of the stars were born in the vicinity of the central black hole or holes, either by direct mass-energy jets or by draining their energy via huge electromagnetic fields with the creation of cosmic dust. • There is a chapter discussing why constant G is not constant in both Global Physics and General Relativity. • Reflections on Cosmology suggest the Big Bang Theory would be incorrect because recent measurements of the expansion of the universe make its age equivalent to the observable universe and not its creation.

Memory, Language and other Brain Abilities José Tiberius, 2019-07-01 Relations between human memory, language, and other brain capacities. Types of brain memory, genetic base and functions of language. How to improve memory, cognitive

learning theory and Global Cognitive Theory. The third on-line book of the Global Cognitive Theory is dedicated to the different types of memory, functional analysis and its genetic base; giving rise to explanations about the power of language and other intellectual capacities and to ideas as how to improve memory and its limits. The memory is the brain's second major function and, undoubtedly, must be correlated to the development of the brain. The cognitive theory of this intellectual capacity until now has not been as developed as that of intelligence; perhaps due to its complexity and the types of existing memories. Language can be an example of this complexity and variability, since it consists of the interaction of different types of intelligence and memory, which are maintained in different physiological and working processes of the brain. Types of memory through their temporal perspective (short, medium, and long term) and by their temporal persistence and reliability. Management of information from the perspective of intelligence as a manager of knowledge or, strictly speaking, memory. Unconscious mechanisms of compression, degradation and reconstruction of information, and conscious optimization mechanisms.
