**Discariche controllate** Sonia Gervasoni,2000

**Discariche controllate** Cinzia Acaia,2015-02-02T00:00:00+01:00 Lo scarico controllato dei rifiuti solidi rappresenta l'ultima fase, imprescindibile, del loro definitivo smaltimento. Al terreno devono tornare infatti i residui e gli scarti di natura solida prodotti da tutti i precedenti trattamenti dei rifiuti, finalizzati a recuperare i materiali e l'energia in essi ancora contenuti. Il volume presenta in forma autonoma i contenuti sulle discariche controllate già presenti nell'85a dell'ingegnere, con nuovi approfondimenti. Progettisti, consulenti, gestori e in generale gli operatori del settore troveranno in questo libro riferimenti aggiornati ai seguenti argomenti: - normativa che regola lo smaltimento in discarica; - diverse tipologie di discariche; - progettazione delle discariche; - costruzione; - gestione; - monitoraggio.

Landfills Greg Roza,1900-01-01 Before the US government enacted strict laws about landfills and toxic waste disposal, tragedies of pollution occurred across the country. Today, landfills are safer and more environmentally friendly, but problems can still happen—and our laws don't stop other countries from continuing poor landfill practices. Readers will learn the

terrible story of Love Canal and the hazardous chemicals that can be produced by landfills. With the help of detailed sidebars and full-color photographs, the main content introduces an important conservation topic, including its social and scientific aspects.

**Garbage and Recycling** Chris Oxlade,2012-07 Each book in this series examines a key utility used by the average household. This book looks at garbage and recycling, and examines what they are, what happens to garbage when it is taken away, and environmental issues arising from the ways we dispose of garbage and choose to recycle in our homes.

The Hydraulic Transport and Storage of Extractive Waste Mike Cambridge,2018-01-18 This book offers the guidelines on long-term confinement of fine particulate waste products in a safe and environmentally acceptable location. It seeks to present the state of the art, drawing on combined experience from within the European Union (EU), on good international practice where relevant and on lessons learnt from recent untoward incidents. These guidelines have been developed in parallel with the development of the European Standard on Earthworks (prEN 16907) and the contents have been influenced by the well-publicised need for guidance to all stakeholders on both technical and regulatory aspects of the permitting, design and construction of extractive waste facilities in Europe. The Extractive Waste Directive (EWD) imposes a duty on all operators and regulators to ensure the competent design, operation and closure of such facilities. However, though some guidance has been published on a limited number of related technical elements, the relevance of these contributions has been diminished by the lack of an integrated approach. It is now evident to both regulatory bodies and operators alike that a unified and comprehensive document providing guidance to all stakeholders is required if the future of mining within the EU is to be assured and further untoward incidents avoided. These guidelines seek to address all technical stages of the development of a hydraulic fill project in the context of the EWD, with an emphasis on waste and facility characterisation and on the risk-based assessments which underwrite them. They are intended for use by all stakeholders involved in those European industries which involve the generation, transport and storage of fine particulate waste products requiring long-term confinement in a safe, stable and environmentally acceptable location.

**Filling the Earth with Trash** Jeanne Sturm,2020-01-01 Updated for 2020, young readers will discover what happens to trash in a landfill and what they can do to create less trash.

Management of Pollutant Emission from Landfills and Sludge Malgorzata Pawlowska,Lucjan Pawlowski,2014-04-21 This book gives an overview of recent findings on the mitigation of gas emission from landfills and sludge processing. Special attention is given to methane and the migration of POPs, heavy metal ions, ammonia and nitrate from landfills to the water-soil system and to the atmosphere. Strategies for mitigating the impact of pollution on ecosystems a

**How Recycling Works** Geoff Barker,2013-08-01 Paper, metal, and glass are all commonly recycled items. Most cities

have a recycling program in place to make it easier for residents to contribute items to the process. But waste is still a big problem! Readers will be encouraged to reduce, reuse, and recycle containers and items that they are done using or have used up. Science and social studies content offers a look at what happens to each material as it's recycled, including the cool process of composting food and other organics. From fact boxes highlighting the ecological issues surrounding waste and recycling to sidebars giving up-close information about more technical topics, the knowledge readers will gain can help them be better informed about how their actions—and the waste they produce—affect Earth. Full-color photographs will drive home the importance of reducing landfills, as well as amaze readers at what recycling can create.

*Successful Approaches to Recycling Urban Wood Waste*, 2002 This report presents eight case studies of successful urban wood waste recycling projects and businesses. These studies document the success of recovered products such as lumber and lumber products, mulch, boiler fuel, and alternative cover for landfills. Overall, wood waste accounts for about 17% of the total waste received at municipal solid waste landfills in the United States. In 1998, the amount of urban wood waste generated was more than 160 million tons, with 29.6 million tons available for recovery. Similarly, in 1998, new construction in the United States generated 8.7 million tons of wood waste, with 6.6 million tons available for recovery; demolition waste generated 26.4 million tons of wood waste, with 9 million tons available for recovery. The case studies were selected on the basis of the following criteria: an emphasis on partnerships among communities, businesses, governments, and non-governmental organizations; efficient use of funds; sustained creation of enterprise; and a high benefit/cost ratio.
