T.U.I.R. 2010. Testo Unico delle imposte sui redditi Alessandro Blasi,Giorgio Minnucci,2010

Top Incomes A. B. Atkinson,Thomas Piketty,2010-04-01 A rapidly growing area of economic research investigates the top of the income distribution using data from income tax records. This volume brings together studies of top incomes for twelve countries from around the world, including China, India, Japan, Argentina and Indonesia. Together with the first volume, published in 2007, the studies cover twenty two countries. They have a long time span, the earliest data relating to 1875 (for Norway), allowing recent developments to be placed in historical perspective. The volume describes in detail the source data and the methods employed. It will be an invaluable reference source for researchers in the field. Individual country chapters deal with the specific nature of the data for each of the countries, and describe the long-term evolution of top income shares. In the countries as a whole, dramatic changes have taken place at the top of the income distribution. Over the first part of the century, top income shares fell markedly. This largely took the form of a reduction in capital incomes. The different authors examine the impact of the First and Second World Wars, contrasting countries that were and were not engaged. They consider the impact of depressions and banking crises, and pay particular attention to the impact of progressive taxation. In the last 30 years, the shares of top incomes have increased markedly in the US and other Anglo-Saxon countries, reflecting the increased dispersion of earnings. The volume includes statistics on the much-discussed top pay and bonuses, providing a

global perspective that discusses important differences between countries such as the lesser increase in Continental Europe. This book, together with volume 1, documents this interesting development and explores the underlying causes. The findings are brought together in a final summary chapter by Atkinson, Piketty and Saez.

Linguistic Choice Across Genres Antonia Sánchez Macarro,Ronald Carter,1998-01-01 This book, based on revised papers originally delivered at the VII International Systemic Functional Workshop in Valencia in 1995, explores some of the choices open to speakers and writers for the expression of meaning in different socio-cultural contexts. Many of the papers draw their inspiration from models of language developed by Michael Halliday and in particular recent theories of variation in relation to texts and genres explored by Halliday and his followers. There is an emphasis on the interdependence and interaction of linguistic choices across sentence boundaries and speaking turns, and also a consistent focus across many papers on the importance of lexicogrammar in the construction of texts. Several papers examine the differences between native-speaker and non-native-speaker choices in speech and writing. The volume also contributes to our understanding of differences and similarities between spoken and written varieties of English and of the central significance of interpersonal functions in the communication of messages. By drawing on naturally-occurring data collected on a range of genres as diverse as philosophy articles, scientific research papers, emergency telephone calls, and casual conversation, contributors both refine descriptions of the relations between text and context and offer numerous new insights and analyses.

universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers.
