*Smart Cities Atlas* Eleonora Riva Sanseverino, Raffaella Riva Sanseverino, Valentina Vaccaro, 2016-11-14 The book discusses the concept of the smart city, and is based on a multi-service and multi-sectoral approach to urban planning, including various urban functions and the human capital of cities. The work is divided into three parts. The first is an introductory section which covers definitions, policies and tools used at European level for the development and classification of a smart city. The second presents a selection of examples of Western and Eastern communities, which experienced technologies and strategies that have made them smart. The third describes in detail the main three possible approaches (economical, technological and social) to the smart city concept which are the focus ambits of the holistic concept of smart city. The work provides a good overview of the concept of smart city, and also offers a critical analysis of the various approaches to smart cities, in order to provide tools to develop solutions that address the smart development of cities with an approach as multi-sectoral as possible. Its accessible language and several examples make the book easy to read and appealing to public administrators, students, planners and researchers.

*Untangling Smart Cities* Luca Mora, Mark Deakin, 2019-06-27 *Untangling Smart Cities: From Utopian Dreams to Innovation Systems for a Technology-Enabled Urban Sustainability* helps all key stakeholders understand the complex and often conflicting nature of smart city research, offering valuable insights for designing and implementing strategies to improve the smart city decision-making processes. The book drives the reader to a better theoretical and practical comprehension of smart city development, beginning with a thorough and systematic analysis of the research literature published to date. In addition, it provides an in-depth understanding of the entire smart city knowledge domain, revealing a deeply rooted division in its cognitive-epistemological structure as identified by bibliometric insights. Users will find a book that fills the knowledge gap between theory and practice using case study research and empirical evidence drawn from cities considered leaders in innovative smart city practices. Provides clarity on smart city concepts and strategies Presents a systematic literature analysis on the state-of-the-art of smart cities' research using bibliometrics combined with practical applications Offers a comprehensive and systematic analysis of smart cities research produced during its first three decades Generates a strong connection between theory and practice by providing the scientific knowledge necessary to approach the complex nature of smart cities Documents five main development pathways for smart cities development, serving the needs

of city managers and policymakers with concrete advice and guidance

**Smart City Blueprint** Tan Yigitcanlar,2023-10-26 The smart city movement, during the last decade and a half, advocated the built environment and digital technology convergence with the backing of institutional capital and government support. The commitment of a significant number of local governments across the globe, in terms of official smart city policies and initiatives, along with the constant push of global technology giants, has reinforced the popularity of this movement. This two-volume treatment on smart cities thoroughly explores and sheds light on the prominent elements of the smart city phenomenon and generates a smart city blueprint. The first volume, with its 12 chapters, provides a sound understanding on the key foundations and growth directions of smart city frameworks, technologies, and platforms, with theoretical expansions, practical implications, and real-world case study lessons. The second companion volume offers sophisticated perspectives on the key foundations and directions of smart city policies, communities, and urban futures, with theoretical expansions, practical implications, and real-world case study lessons. These volumes offer an invaluable reference source for urban policymakers, managers, planners, practitioners, and many others, particularly to benefit from it when tackling key urban and societal issues and planning for and delivering smart city solutions. Moreover, the book is also a rich and important repository for scholars and research and undergraduate students.

*Smart Cities* Antoine Picon,2015-11-30 As cities compete globally, the Smart City has been touted as the important new strategic driver for regeneration and growth. Smart Cities are employing information and communication technologies in the quest for sustainable economic development and the fostering of new forms of collective life. This has made the Smart City an essential focus for engineers, architects, urban designers, urban planners, and politicians, as well as businesses such as CISCO, IBM and Siemens. Despite its broad appeal, few comprehensive books have been devoted to the subject so far, and even fewer have tried to relate it to cultural issues and to assume a truly critical stance by trying to decipher its consequences on urban space and experience. This cultural and critical lens is all the more important as the Smart City is as much an ideal permeated by Utopian beliefs as a concrete process of urban transformation. This ideal possesses a strong self-fulfilling character: our cities will become 'Smart' because we want them to. This book opens with an examination of the technological reality on which Smart Cities are built, from the chips and sensors that enable us to monitor what happens within the infrastructure to the smartphones that connect individuals. Through these technologies, the urban space appears as activated, almost sentient. This activation generates two contrasting visions: on the one hand, a neo-cybernetic ambition to steer the city in the most efficient way; and on the other, a more bottom-up, participative approach in which empowered individuals invent new modes of cooperation. A thorough analysis of these two trends reveals them to be complementary. The Smart City of the near future will result from their mutual adjustment. In this process, urban space plays a decisive role. Smart Cities are contemporary with a 'spatial turn' of the digital. Based on key technological developments like geo-

localisation and augmented reality, the rising importance of space explains the strategic role of mapping in the evolution of the urban experience. Throughout this exploration of some of the key dimensions of the Smart City, this book constantly moves from the technological to the spatial as well as from a critical assessment of existing experiments to speculations on the rise of a new form of collective intelligence. In the future, cities will become smarter in a much more literal way than what is often currently assumed.

From Smart City to Smart Region Corinna Morandi, Andrea Rolando, Stefano Di Vita, 2015-08-14 This book offers a fascinating exploration of the relationship between information and communication technologies (ICTs) and spatial planning, expanding the concept of “urban smartness” from the usual scale of buildings or urban projects to the regional dimension. In particular, it presents the outcomes of research undertaken at Politecnico di Milano, in collaboration with Telecom Italia, that had three principal goals: to investigate the use of ICTs for the representation, promotion, management, and dissemination of an integrated system of services; to explore the spatial impacts of digital services at different scales (regional, urban, local); and to understand how a system of mobile services can encourage new spatial uses and new collective behavior in the quest for better spatial quality of places. Useful critical analysis of international case studies is also included with the aim of verifying the opportunities afforded by new digital services not only to improve the urban efficiency but also to foster the evolution of urban communities through enhancement of the public realm. The book will be a source of valuable insights for both scholars and local administrators and operators involved in smart city projects.

**Smart and Sustainable Planning for Cities and Regions** Adriano Bisello, Daniele Vettorato, Richard Stephens, Pietro Elisei, 2016-11-03 This book presents cutting-edge work on innovative planning methodologies, tools and experiences aimed at supporting the transition of our cities and regions towards a more smart and sustainable dimension. This book comprises a selection of the best papers presented at the international conference “Smart and Sustainable Planning for Cities and Regions 2015”, held in November 2015 in Bolzano, Italy. Contributions from different research fields within urban and regional planning from the scientific as well as the professional community are presented: energy planning for cities and regions, how to couple the energy-climate goals with the development or renovation of the built environment and how to tackle the vulnerability to climate change; smart and sustainable technologies, big data, integrated infrastructures and mobility management, from holistic geospatial tools to innovative apps and Internet of Things; benefits, costs and opportunities of urban transition toward a more smart and sustainable dimension, accounting and assessment of values and trade-offs within the decision making processes; governance for smart and sustainable growth, fostering place-based policy-making, active and effective stakeholders’ participation, co-production and public-private partnerships; cooperation and demonstration projects: their role in fostering the adoption of new approaches and technologies, towards the development of win-win solutions.

Smart Cities Zaigham Mahmood,2018-04-13 This invaluable text/reference investigates the state of the art in approaches to building, monitoring, managing, and governing smart cities. A particular focus is placed on the distributed computing environments within the infrastructure of such cities, including issues of device connectivity, communication, security, and interoperability. A selection of experts of international repute offer their perspectives on current trends and best practices, and their suggestions for future developments, together with case studies supporting the vision of smart cities based on the Internet of Things (IoT). Topics and features: examines the various methodologies relating to next-level urbanization, including approaches to security and privacy relating to social and legal aspects; describes a recursive and layered approach to modeling large-scale resource management systems for self-sustainable cities; proposes a novel architecture for hybrid vehicular wireless sensor networks, and a pricing mechanism for the management of natural resources; discusses the challenges and potential solutions to building smart city surveillance systems, applying knowledge-based governance, and adopting electric vehicles; covers topics on intelligent distributed systems, IoT, fog computing paradigms, big data management and analytics, and smart grids; reviews issues of sustainability in the design of smart cities and healthcare services, illustrated by case studies taken from cities in Japan, India, and Brazil. This illuminating volume offers a comprehensive reference for researchers investigating smart cities and the IoT, students interested in the distributed computing technologies used by smart living systems, and practitioners wishing to adopt the latest security and connectivity techniques in smart city environments.

Comparative Study of Smart Cities in Europe and China 2014 China Academy of Information and Communi,EU-China Policy Dialogues Support Facili,2015-08-26 This book, examining smart-city trends and developments from global, Chinese and EU perspectives, shows how the concept of the smart city varies from city to city. A detailed analysis is made to present the smart city as an up-to-date model of world city. Thirty pilot cities answer questions designed by the “Smart City Evaluation Framework,” including managerial entities, stakeholders, project description and performance and whatever else relates to smart cities. By assessing the answers, researchers reveal major trends, best practices and challenges confronting smart city campaigns. Recommendations and solutions are provided. This is a must-read for anyone wishing to understand Chinese and European cities in terms of ideas about city development, plausible practice, natural and geographic conditions, economic structure and infrastructure robustness. Innovation and updates in telecommunication technology is regarded as indicative of city intelligence and green, low-carbon and sustainable development. This innovative book offers an interdisciplinary perspective and shall be of interest to researchers, policy analysts and technical experts involved in and responsible for the planning, development and design of smart cities.

**Smart Cities** Tobias Hadzik,2016-08-24 Die Smart City ist das ganzheitliche Konzept, mit dem Städte zukunftsfähig, lebenswerter, nachhaltiger, partizipativer, wettbewerbsfähiger, in ihren politischen Entscheidungen und Prozessen

transparenter und im Regieren leistungsfähiger gemacht werden sollen. Mit Smart City soll den Herausforderungen urbaner Zentren begegnet werden. Das Konzept durchdringt als ein integrierter Ansatz alle Lebensbereiche der Stadt. Vernetzung durch Informations- und Kommunikationstechnologie ist ein wesentlicher Bestandteil der Smart City. Auf der Grundlage einer breiten Recherche gibt diese Arbeit einen Überblick über das Themenfeld. Für Praktiker soll sie einen Ausgangspunkt für die Konzeption eines eigenen Smart City-Vorhabens schaffen und den Zugang zum tiefergehenden Studium der Thematik bieten. Der Arbeit wird eine abgewägte Smart City-Definition zu Grunde gelegt, die um die Beschreibung der Smart City-Handlungsfelder und exemplarischen Services ergänzt wird. Die Bestandsaufnahme umfasst die Darstellung von für die Praxis relevanten theoretischen Überlegungen und Modellen sowie der Aktivitäten internationaler Konzerne, der Europäischen Union, der Bundesrepublik Deutschland und ausgewählter deutscher Städte.

**The Smart City - how smart can 'IT' be?** Malin Granath, 2016-08-30 Cities are facing many challenges; challenges linked to world-wide trends like urbanisation, climate changes and globalisation. In parallel to these trends, we have seen a rapid digitalisation in and of different parts of society. Cities and local governments have been appointed an important role in overcoming these world-wide challenges, and subsequently, in policy practices digitalisation is perceived as an important dimension in delivering better and sustainable services to its citizens. As a result, the smart city has emerged as a concept and approach to contemporary urban planning and development. There is still no common understanding of the concept and what components and dimensions it covers. However, in all definitions digitalisation constitutes one dimension, but the role and function of it is still not clear. In this study I have examined how different stakeholders talk about digitalisation in policy and planning practices of urban development. The aim has been to identify and analyse different repertoires of discourses on digitalisation to advance our knowledge on how goals related to the smart city and digitalisation are put into practice. The results are based on a qualitative and interpretative case study with a social constructionist approach. An analytical framework based on discourse analysis, stakeholder theory and (new) institutional theory has been constructed to analyse the case. Main results show that repertoires on digitalisation are limited in both policy and planning of urban development. In these practices, digitalisation is primarily seen as a means or as a communication infrastructure in relation to two city services/functions; i.e. services related to governance and to environment. Results also show that practices of urban planning and development are institutionalised, where different stakeholders' salience and stakes in urban development and in digitalisation differ, but it is clear that digitalisation is a secondary issue. Implications of these results are that the taken-for-granted discourses in policy and planning practices of urban development limit both practice and research when developing a smart city. Städer står inför många utmaningar kopplat till världsomspännande trender såsom urbanisering, klimatförändringar, och globalisering. Parallellt med dessa trender har vi sett en snabb digitalisering i och av olika delar av samhället. I detta sammanhang har städer och kommuner blivit tilldelade en viktig roll i hanteringen av dessa utmaningar. På

policynivå ses digitalisering som en viktig dimension för att leverera hållbar och bättre service till medborgarna. Som ett led i detta har smarta städer vuxit fram som både begrepp och metod för stadsplanering och stadsutveckling. Det finns dock ingen gemensam tolkning av begreppet. Däremot finns digitalisering med som en dimension i definitionerna, men vilken roll och funktion den har är fortfarande oklart. I denna studie har jag undersökt hur olika intressenter talar om digitalisering i olika policy- och planeringspraktiker kopplat till stadsutveckling. Syftet har varit att identifiera och analysera repertoarer av digitaliseringsdiskurser för att bidra med kunskap om hur mål kopplade till smarta städer och digitalisering omsätts i praktiken. Resultaten är baserade på en kvalitativ och tolkande fallstudie med en socialkonstruktionistisk ansats. Ett analytiskt ramverk baserat på diskursanalys, intressentanalys, och nyinstitutionell teori har tagits fram för att analysera fallet. Resultaten visar att digitaliseringsrepertoarer är begränsade både i policy och i planering av stadsutveckling. I dessa praktiker ses digitalisering främst som ett verktyg eller en kommunikationsinfrastruktur i relation till två samhällsfunktioner, nämligen funktioner kopplade till styrning och administration, och funktioner kopplade till miljö. Resultaten visar också att praktiker kopplade till stadsplanering och stadsutveckling är institutionaliserade, praktiker där olika intressenter har olika makt, legitimitet och angelägenhet gällande stadsutveckling och digitalisering. Det är dock tydligt att digitalisering är en sekundär fråga. Implikationerna av dessa resultat är att de förgivettagna diskurserna begränsar både praktiken och forskningen i utvecklingen av smart städer.

Laboratorio Expo Salvatore Veca (a cura di), 2015-10-22T00:00:00+02:00 This volume of *The Annali* is meant to collect among some the most significant outcomes of the research activities having characterised the “adventure of ideas” of Laboratorio Expo during the two-year period 2013-2015. The project ‘Laboratorio Expo’ has been conceived and structured in 2012. Its research programs had been presented in June 2013 and all activities launched in September of that year, thanks to an agreement between the Giangiacomo Feltrinelli Foundation and the company Expo Milano 2015 SpA. In the first part of the volume, Scientific research for a sustainable development, the outcomes of the research have been described and discussed, divided into the different subject areas of the complex and articulated activity carried out within the project ‘Laboratorio Expo’. The second part, Problems, ideas and proposals, is made up of a wide range of different contributions provided by distinguished researchers working in research and academic Institutions for the development of this project and the sharing of ideas. In the Appendix, we have included both an accurate report of the all activities carried out in the two-year period 2013-2015 and the Charter of Milan, the cultural legacy of Expo Milano 2015, that has been coordinated and drafted by Laboratorio Expo, under the supervision of the Italian Minister of Agriculture, Maurizio Martina and of the Italian government. Laboratorio Expo is based on a very simple idea: developing the research and the sharing of ideas within the international scientific community around the central theme of this 2015 Universal Exhibition held in Milan. Within the Laboratorio, the theme ‘Feeding the Planet, Energy for Life’ has been developed and articulated through four main subject

areas. And with these four areas of investigation, all based on the assessment and analysis of the many faces of sustainability and its intrinsic plural dimensions, Laboratorio Expo worked as a public space where reflections, content experiences, practices, and perspectives could be shared, all scientifically based on the Expo's main theme.

*Smart Economy in Smart Cities* T. M. Vinod Kumar, 2016-08-25 The present book highlights studies that show how smart cities promote urban economic development. The book surveys the state of the art of Smart City Economic Development through a literature survey. The book uses 13 in depth city research case studies in 10 countries such as the North America, Europe, Africa and Asia to explain how a smart economy changes the urban spatial system and vice versa. This book focuses on exploratory city studies in different countries, which investigate how urban spatial systems adapt to the specific needs of smart urban economy. The theory of smart city economic development is not yet entirely understood and applied in metropolitan regional plans. Smart urban economies are largely the result of the influence of ICT applications on all aspects of urban economy, which in turn changes the land-use system. It points out that the dynamics of smart city GDP creation takes 'different paths,' which need further empirical study, hypothesis testing and mathematical modelling. Although there are hypotheses on how smart cities generate wealth and social benefits for nations, there are no significant empirical studies available on how they generate urban economic development through urban spatial adaptation. This book with 13 cities research studies is one attempt to fill in the gap in knowledge base.

Smart City - Kritische Perspektiven auf die Digitalisierung in Städten Sybille Bauriedl, Anke Strüver, 2018-10-31 »Smart City« steht für das Versprechen einer Zukunft mit hoher Lebensqualität für alle - aber auch für eine Zukunft der Überwachung und Kontrolle von öffentlichen und privaten Räumen. Wie verändert der Einsatz digitaler Technologien und Infrastrukturen die aktuelle Raumwahrnehmung, Raumproduktion und Raumnutzung in Städten? 35 Stadtforscher\_innen betrachten die unterschiedlichen Bewertungen der »Smart City« und geben einen Überblick über die kontroverse Debatte. Sie beschreiben an praktischen Beispielen die Verknüpfung von Echtzeitdaten sowie die Nutzung von Geoinformationen im urbanen Alltag und diskutieren deren Beitrag für eine nachhaltige Stadtentwicklung, partizipative Demokratie und soziale Gerechtigkeit in Städten. Sie zeigen: Die digitale Transformation ist ein umkämpftes Terrain von IT-Unternehmen, Stadtregierungen und stadtpolitischen Bewegungen.
